

POLYCOOL SPACING GUIDE

Once fan and Polycool numbers have been selected you will need to space the Polycool pedestal units evenly throughout the building.

Use the table opposite as a guide to the maximum spacing between units at different storage depths .

An allowance must be made for sloping front face of the stored crop. This may result in the removal of one row of Polycool pedestals.:

How many fans

MOISTURE CONTENT OF CROP	TONNES OF GRAIN VENTILATED BY A VBW8 OR EVOLUTION FAN	TONNES OF GRAIN VENTILATED BY A VBW9 FAN
15% and below	250	400
16-17%	175	300
18%	100	200

How to space pedestals in your grain store

STORAGE DEPTH	MAXIMUM SPACING
2.5-3.5m	Storage depth plus 100%
3.6-5.0m	Storage depth plus 75%
5.1m and above	Storage depth plus 50%

Storage depths of 5.5m and above should be a matter for individual appraisal.
